

# PREPARE FOR FIRE

# Pyrene

TRADE MARK

## FIRE EXTINGUISHERS

*Are the Most Efficient Known*

### The Compound Pyrene

Is a non-conductor of electricity. It can be used with perfect safety on the highest voltages.

Does not deteriorate with age. Therefore cost of maintenance is entirely eliminated.

Does not freeze. It is therefore serviceable in the lowest temperatures.

Does not contain acid, alkali or moisture. It is therefore non-damaging.

Brass and nickel-plated Pyrene Fire Extinguishers are included in the lists of approved fire appliances examined under the requirements of the National Board of Fire Underwriters, by the Underwriters' National Electric Association, after exhaustive tests by the Underwriters' Laboratories, and approved for use.

### The Double-Acting Pyrene Pump

Is the most effective method of getting an extinguishing agent on a fire. Pyrene Extinguishers are strongly constructed of the very best materials and carefully tested at the factory.
